

Self-Guided Learning

Lift Your Gifts exists to help homeschooled high school students discover who they are, develop what they're capable of, and step into a future that's genuinely theirs. Most curriculum tells students what to learn, when to learn it, and exactly how to show they learned it. We've never been interested in that. Not because rigor doesn't matter, it does, but because the most important thing a student can develop in high school isn't a body of knowledge. It's the ability to pursue what they're curious about, think critically about what they find, and figure out who they want to become. That's what every unit study here is built to do. Each one is a structured invitation into deep, multi-subject exploration with room for the student to shape the experience, go further where it interests them, and connect their learning to the real world through field trips and community service. Because learning that stays on the page has a shelf life. Learning that gets you out the door tends to stick.

Our name isn't accidental. Every word in it means something specific, and together, they describe exactly what we are trying to do.

Lift

Every unit is designed to move students forward, toward their goals, toward their potential, and toward a community that benefits from their presence in it.

Your

You are not a template. Our curriculum is designed to be personalized, because the most powerful education is one that fits the actual student sitting in front of it.

Gifts

You have something unique to offer the world. Our units are designed to help you find it, develop it, and understand where it can make a real difference.

What we believe.

A few convictions that shape everything we make

- Curiosity is the engine.
- A student who wants to know something will outlearn a student who is required to every time. Our unit studies are designed to spark genuine interest and then get out of the way.
- Learning belongs in the world.
- Field trips and community service aren't extras, they're where ideas become real. We include them in every unit because we believe showing up somewhere matters.
- Self-direction is a skill.
- Not every student arrives knowing how to guide their own learning. That's fine. Our framework builds that capacity gently and deliberately, one unit at a time.
- High school is a discovery period. Students who get the chance to explore broadly, across subjects, across communities, across ideas, figure out what they care about. That's not a detour from real education. That is real education.
